# SNCF Tracker

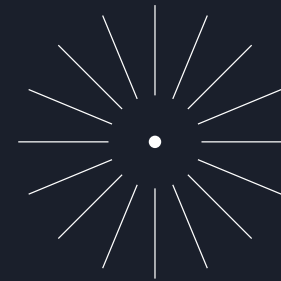

---

Enhancing Operational Efficiency  
and Customer Satisfaction

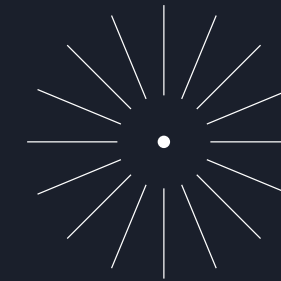

Customer satisfaction is your most valuable asset.

The SNCF currently holds a monopoly position.

To maintain this status, service delivery must be flawless.

Competitors eager to enter the market.

# Strategic Pain Points

1

## Delays generate more delays

Late trains cause disruptions on the lines, directly affecting the arrival times of other trains. These disruptions create a snowball effect.

2

## Reputation Management

Customer sentiment defines your success. Protect your reputation by ensuring customer satisfaction, securing your market position.

3

## Insufficient live visibility on incidents affecting operations.

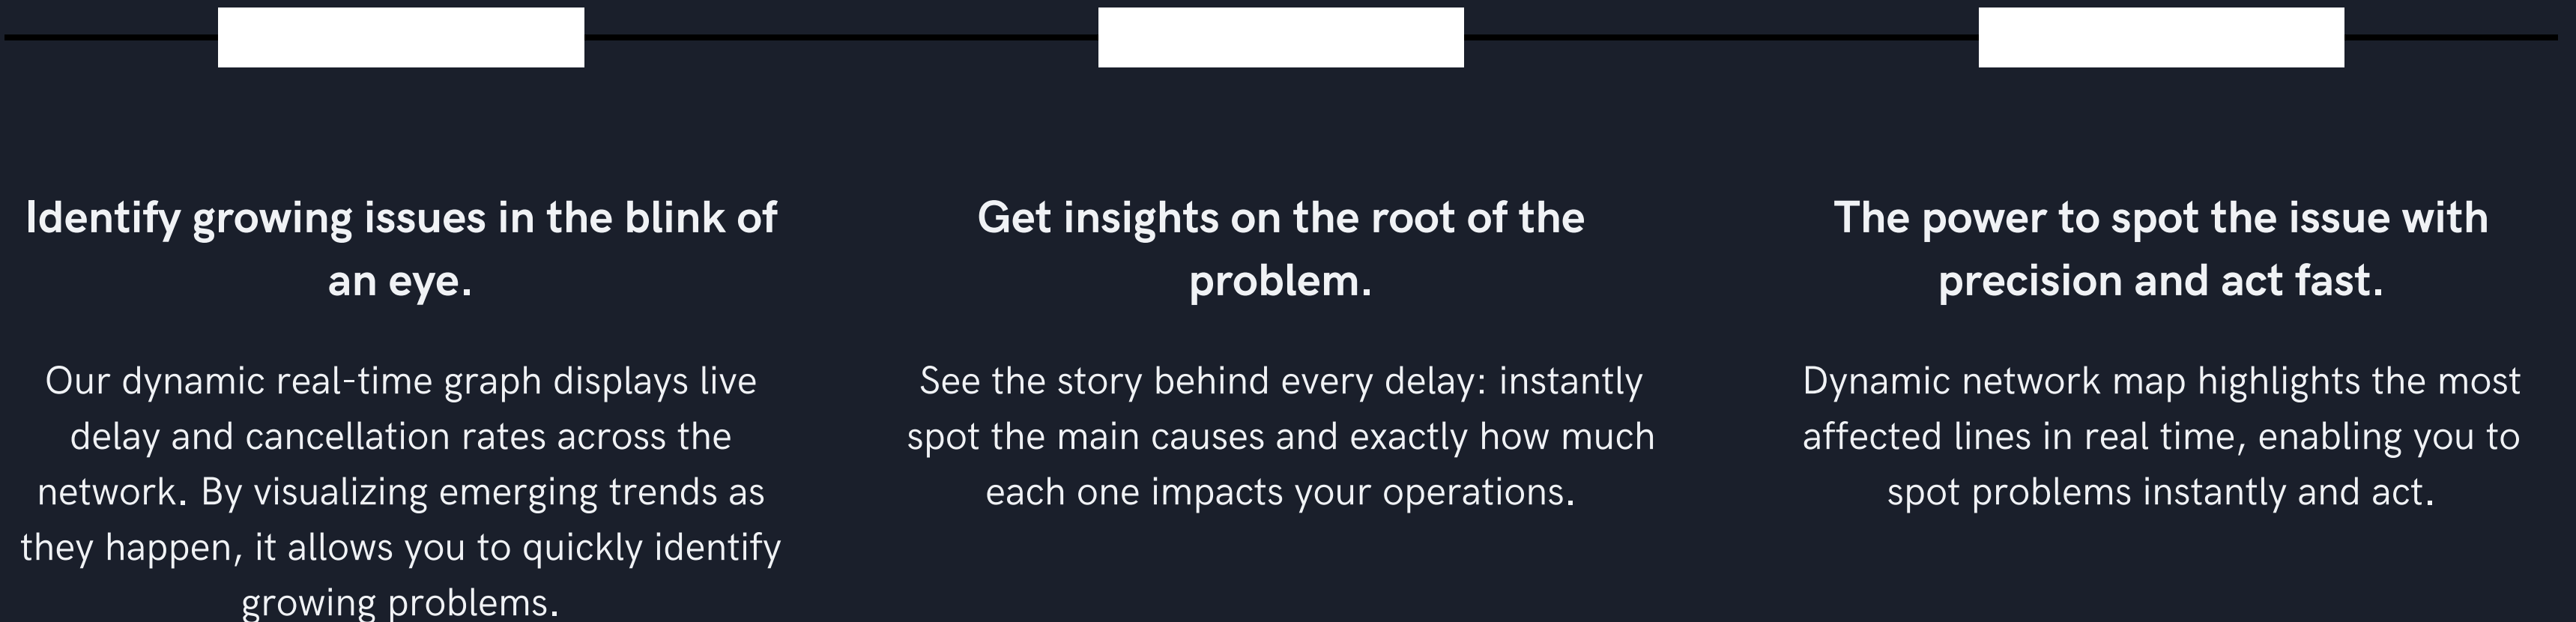

Delays or incidents are often detected only after customer impact has already occurred.

SCNF Tracker:  
your data-  
driven solution  
to stay ahead

# Core Value Proposition

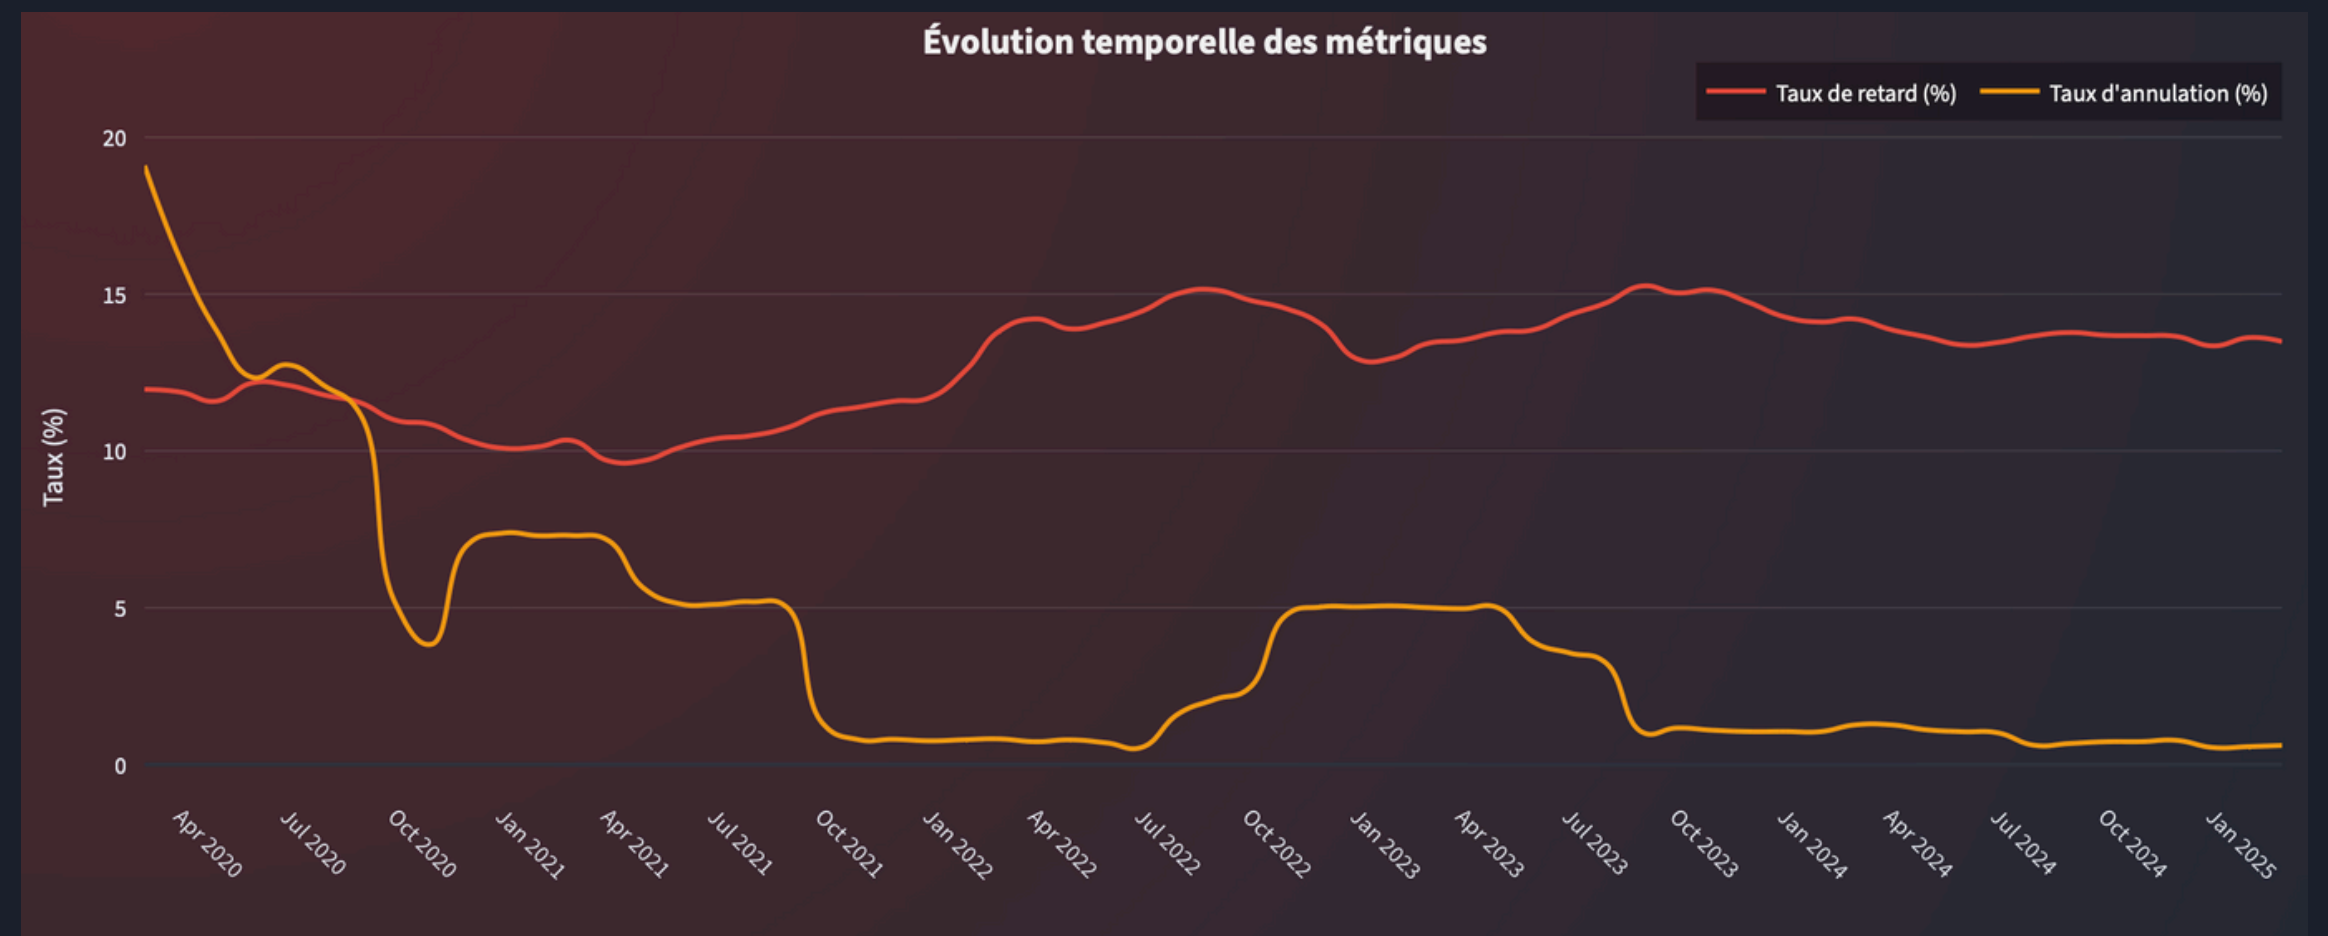

Transforming SNCF's Operations with Data

# Stay aware of the network health

Visualize catching tendencies through our dynamic graphic to monitor the health of the network in real time.

Rather it is on specific lines or the overall health of the network, never lose sight of what's going on.

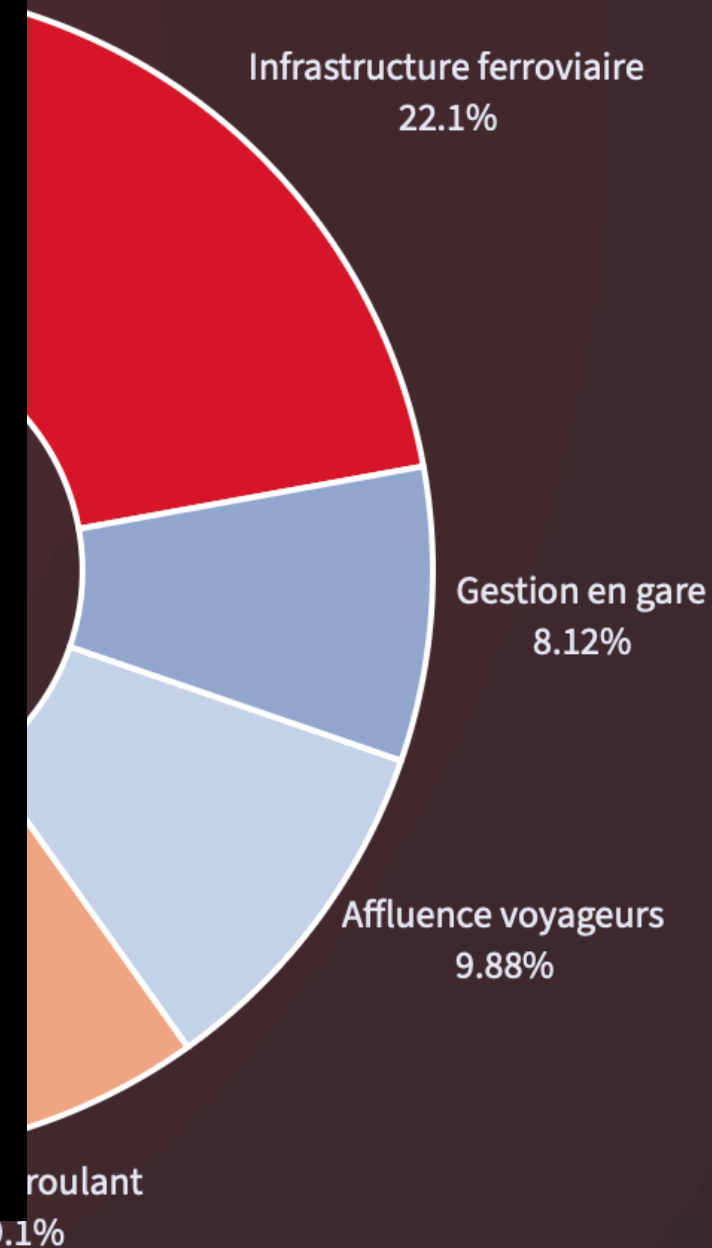

# Root cause analysis

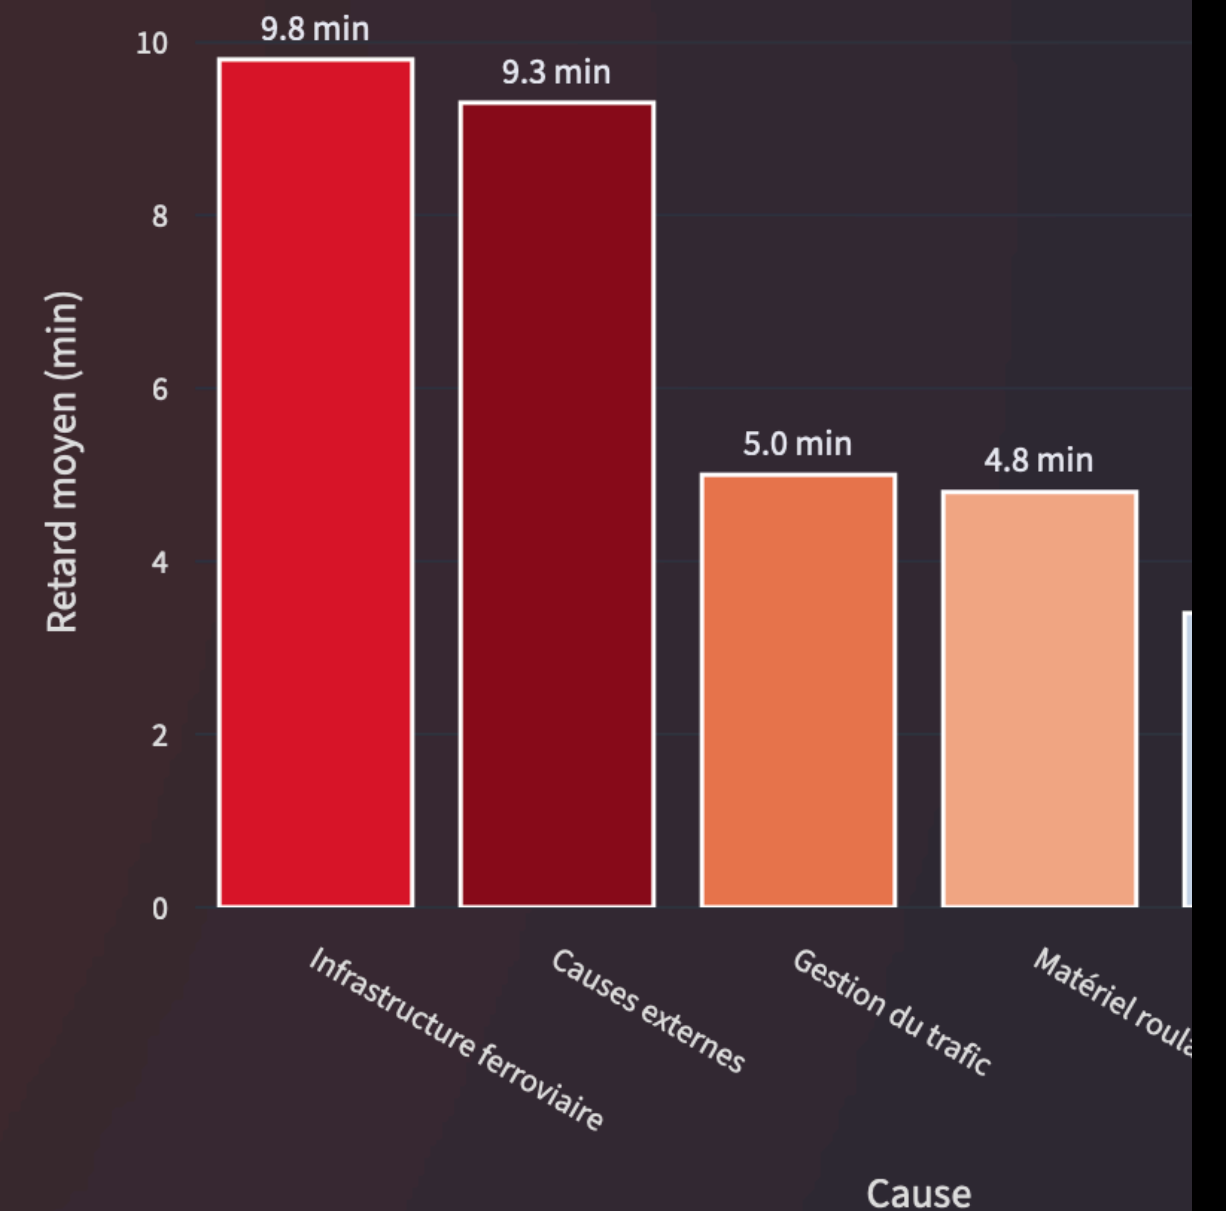

Gain the power to pinpoint the appropriate action to take for every situation.

Deeper insights on the source of the problem through our specially dedicated section.

# Geographic Visualization for Enhanced Focus

---

Embrace the power of the interactive map that allows you to see in real time where to take action.

Allocate resources effectively to mitigate disruptions.

# Enhancing Operational Efficiency

## Real-time monitoring

Enables you to detect issues immediately, allowing for swift resolution and minimized disruptions in service.

## Streamlined communication

Facilitates quick information sharing among teams, ensuring coordinated efforts and timely responses to operational challenges.

# Expected Improvements

## Enhancing Efficiency and Satisfaction

### Reduced Delays

Implementing real-time data analytics is expected to significantly decrease train delays, optimizing scheduling and improving on-time performance, ultimately resulting in a better travel experience for customers.

### Better Resource Use

The app will facilitate smarter resource allocation, ensuring that operational staff and trains are deployed efficiently, thus maximizing productivity while minimizing costs and resource wastage.

# Transform SNCF Together

Schedule a Demo

Discover how our data-driven app can revolutionize SNCF's operations. Schedule a demo or pilot today to experience firsthand the benefits of enhanced efficiency and improved customer satisfaction.

# Contact Us

Thank you for considering our innovative solution to enhance SNCF operations.
